

Living on the edge: The Ecology and Behaviour of Gray Jays in Algonquin Park

An Illustrated Presentation by
Ryan Norris

credited to Brett Forsyth

Although Canada Jays are common residents of our North American boreal forests, their natural history and ecology remains somewhat of a mystery, even to those that see them regularly. Using a combination of long-term data and recent experiments, I will discuss the year-round ecology of this fascinating and highly intelligent bird, including what factors influence their survival and reproductive success. I will also address why we have observed over a 50% decline of Gray Jays at the southern edge of their range and how this may be related to long-term changes in climate.

FRIDAY, March 29th, 2019

Doors open at 7:00 meeting starts 7:30 PM

COBOURG Public Library

200 Ontario Street, COBOURG, ON
